1.Describe your greatest achievement and your role in it.

My greatest achievement was completing my computer science degree from unity university with honor in addition to completing my university degree I have taught my self different computer science skills for example learning programming, UI/UX design, Software architecture and Design concepts , and API concepts, I have developed Ecommerce website for my Ecommerce class a project using python + Django and for our final project we designed Digital Health Management System for Ethiopian Minister of Health my role in this project was designing the documentation and working along with my friends to develop the API for this system. And as freelancer developer I have developed www.tablesea.com 's front end website design.

2. Code a script (in a language of your choice) that prints the numbers from 1 to 100. But for multiples of three print "Lion:" instead of the number and for the multiples of five print "Dev"$ ". For numbers which are multiples of both three and five print "Lion:Dev"$ ".

I am using python programming language to solve this problem and here is the code

```python
def examAnswer():

        for number in range(1,101):

                if(number % 3 == 0 and number %5 == 0):

                        print("Lion:Dev\"$")

                elif(number %3 == 0):

                        print("Lion:")

                elif(number % 5 == 0):

                        print("Dev\"$")
                else:

                        print(number)

if __name__ == "__main__":

        examAnswer()
```
